

Press Release:

December 04, 2006 Victoria, BC. Canada

**LanCensus for Windows Vista**

Tecnet Canada Inc. today announced the release of a new LanCensus version. LanCensus V4.0 has successfully advanced from extensive beta testing into production. The new release replaces its' predecessor which was a 32 bit application with one 16 bit component. The 16 bit component was required to capture vital system information from the BIOS of older Windows 98, NT and W2K workstations.

“The previous version was ideal for multi-platform Windows environments but the majority of our customers have migrated to Windows XP and are looking ahead to Microsoft’s new Vista operation system” according to Don Burrows, Tecnet’s General Manager.

Vista is the latest Microsoft operating system that is currently available in beta version to Microsoft Business Partners such as Tecnet and Volume Licensing clients. “Security is a critical issue and as such we have to insure that LanCensus moves forward with Microsoft and keeps our customers safe from any vulnerabilities. “Allowing any 16 bit application to run on new 32 or 64 bit operating systems could result in security exposures in the future. We have therefore recompiled and removed 16 bit section of code from the application” he went on to say.

The new version comes with exciting enhancements to the dynamic suite of LanCensus asset management features including:

- Integration with financial and accounting systems.**
- Automated data sharing with Help Desk Analyst systems.**
- Detailed system hardware and software inventory with physical locations.**
- Patch management, hot fix and antivirus definition status auditing.**
- Simplified project planning, Moves, Adds, Changes and asset disposal.**
- Detailed security advisories including malicious software detection.**
- Enhanced integration with Microsoft Active Directory.**
- New online hardware, software and security reporting query capability.**

About Tecnet Canada Inc.

Tecnet Canada Inc. has provided reliable service solutions to information technology customers since 1974. Tecnet delivers success in today's diverse information technology environment, meeting the demand for one-stop vendor-neutral support and maintenance. Headquartered in Victoria, British Columbia, Tecnet is an industry leader in the development of integrated Help Desk, Asset Management and Inventory solutions.
